BioBag Biodegradable Compostable Tall Kitchen Bags

[BioBag Biodegradable Compostable Tall Kitchen Bags](#)

Brand: BioBag

Manufacturer: BioBag

Features:

Biodegradable & Compostable!

Biobags are the perfect solution for handling garbage. Manufactured from GMO-free corn, these trash bags are 100% biodegradable and 100% compostable. The 3 Gallon Kitchen bags work well in a small trash container or composter, but are also great for food storage. Since Biobags breathe without leaking, they allow heat and moisture to escape, keeping fruits and vegetables fresher days longer than regular plastic. The 3 gallon bags measure 17" x 18" and are .62 mil thick. Regular polyethylene-based plastic bags can take over 100 years to break down and are not compostable. Sadly, less than 2% of all plastic bags ever get recycled. Plastic bags are everywhere, littering our beaches, lakes and Ocean. Studies estimate that over 100,000 marine animals and 2 million birds die every year from ingesting or being caught up in plastic debris. Using Biobags can help break this vicious cycle. Some manufacturers are blending additives to polyethylene to produce what they call "degradable" bags. Unfortunately this process fragments the bag into plastic pieces that do not meet industry standards for biodegradable or compostable plastic. Don't be fooled by imitations, stick with Biobags and help make a difference. Packaged in recycled, biodegradable and compostable boxes with soy ink labeling, everything about BioBags is green.

Happy with quality

- I've used 3 boxes of these bags and overall I'm very happy with the quality. It's best not to cram them completely full and you need to realize this is not a Hefty bag, but I've never had one break on me. I don't think they are as tall as some "tall" sized Hefty bags but my trashcan is on the small side so these are a fine size for me.
