

BioBag Product Facts

Our products include commercial liners for foodservice operations, custom bags and buckets for municipalities, retail products, films for agriculture, packaging, and more.

- BioBag works with communities around the world to provide alternatives to keep food waste, yard waste, and other compostable materials from entering landfills.
- BioBag is the world's largest brand of certified compostable bags and films made from the material Mater-Bi. Mater-Bi's ingredients consist of starches derived from plants, vegetable oils, and compostable polymers from both renewable raw materials and fossil raw materials.
- BioBag products are certified by the Biodegradable Products Institute to meet the US ASTM D6400 standard for compostable plastic as well as the European Standard EN 13432. Many of our products are also certified by OK Compost HOME (European) for disposal in home backyard compost settings.
- Many municipal composting facilities report BioBags compostability in 10-45 days, leaving no harmful residue.
- BioBag films are manufactured in the United States, Canada, Belgium, Chile, Thailand, Estonia, and Portugal with resin sourced from Italy.
- A great alternative to regular plastic bags, BioBag has been producing compostable bags since 1992 and today offers the widest selection of compostable film products in the marketplace.
- BioBag makes a variety of bag sizes from 8L - 350L, a variety of styles including shopping bags and produce bags, and is also known for our customizable capabilities.
- BioBag products breathe, allowing moisture to escape, thus minimizing odor, mold, mildew and water weight.
- BioBags keep waste containers clean, reducing the "ick" factor.
- BioBags are shelf stable, however, for best results, they should be used within 12 months of purchase.
- BioBags increase the participation rate of sorting, collecting and diverting organics from landfills.
- Beyond the Bag: We do more than just bags. Our compostable film has been used for packaging, diapers, feminine hygiene products, garden film, and many more applications.

Support and Encourage Composting in your Area: Approximately 30% of landfill waste is organic waste. By diverting organic waste from the landfill and composting it, we can reduce greenhouse gases and create nutrient rich top soils for agriculture thus reducing the need for petroleum-based fertilizers. Compost also enhances retention of water and nutrients, and makes the soil easier to cultivate. Visit www.findacomposter.com for compost facilities near you.

Certifications

Certified Compostable according to the European Standard EN 13432 and the US Standard ASTM D6400.
